GEARING
UP FOR

Christmas

The Christmas Season is upon us, and with the shopping, caroling and family time comes the Christmas production season for churches across the country. This year, make your holiday events even more special by allowing Design 2020 to perform a tune-up on your audio, video or lighting systems before the production.

Perhaps your audio system needs a checkup. Maybe your video cameras just aren't matching or you are in need of a fresh lighting look. Design 2020 is a phone call away and will be happy to assist you in refreshing your systems before your next big event! Call us at 1.800.613.2518 to set up an appointment today.

BRENTWOOD BAPTIST CHURCH

Brentwood Baptist Church in is a large congregation in Brentwood, TN, just south of Nashville. In 2007, the church called upon Design 2020 and HH Architects to develop a chapel addition to their expansive facility to host weddings, funerals and other small events. Design 2020 assisted HH Architects in creating a traditional worship and assembly space that is both beautiful and functional, opening in November 2009. With its expansive ceilings and arched aisleways, the space features a warm, diffuse acoustical character that naturally reinforces both vocal and instrumental performance.

For more contemporary events, Design 2020 employed a steered line array system from Renkus-Heinz. Integrated with the architecture, the arrays virtually disappear in the space while covering the nave and technical balcony with intelligible sound. Subwoofers are concealed to support contemporary music reproduction. The audio is complemented by an integrated video projection system from Christie. Design 2020 also implemented a theatrical lighting system from ETC with architectural controls. Lighting positions were carefully integrated into the architecture of the space. Design 2020 succeeded in joining the old with the new, bringing modern technology to a classic design.
